NOVELTY - The server certificates issued by an authentication server are used to ensure secured communication. A client carries out encryption of the message using information in the user certificate and the unique ID of the user and sends out the message. The server decodes the message from the information in the certificate.
- USE - For providing secured communication in client server networks such as internet.
- ADVANTAGE - Ensures high level security with a single sign-on.
DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of the network system. (Dwg.1/7)
